

Promptathon

ICEPOT Component

Scenario Name	File Upload
Weak Prompt	Generate test cases for file upload
What I feel is missing	Instructions are not in detail The context(background) is missing Example is missing The assigned role is missing The output format is missing The tone is missing What type of test cases is missing The data type of the file is missing Size limits of file is missing Success failure criteria is missing Security detail is missing Mention of functional or Non-function test case is missing in the instruction Important Criterias are missing Meta tags are missing The data content in the file is missing
Instruction	[Mandatory]Generate functional test cases for file upload. [Mandatory] The file details uploaded should match with the details displayed in Salesforce application of the uploaded file [Do Not] Create Non-functional test cases [Important]The file upload is for files with file type in .CSV format. [Strict] The file size should be between 1KB and 500 KB [Strict] Success message should be displayed when file is uploaded successfully [Strict] Failure message should be displayed when file is not uploaded successfully [Strict] An error message should be displayed when an attempt is made to upload malicious file

Context	The testing will be performed in Salesforce application in test environment for US Health care domain. The import/file upload functionality is introduced under Fee Schedule section in Salesforce application. The file will contain the transaction details of the amount transferred from the Insurance company to the hospital. The file details uploaded should match with the details displayed in Salesforce application after the file upload is complete
Example	001 Validate file upload for valid .CSV format file in Salesforce application 1. Login into Salesforce application in test environment Navigate to Fee Schedule Object Click on upload Browse and select the .CSV file that needs to be uploaded Click on Save Verify is Success message is displayed for Successful upload Verify the details in the upload file in Salesforce application matched with the file that was uploaded
Persona	Act as a Senior Test Engineer
Output Format	ID Description Pre-Requisite Steps to Execute Expected Results
Tone	Need to create test case to technically validate the functionality
Rewritten Prompt	Act as a Senior Test Engineer. The testing will be performed in Salesforce application in test environment for US Health care domain. The import/file upload functionality is introduced under Fee Schedule section in Salesforce application. The file will contain the transaction details of the amount transferred from the Insurance company to the Hospital. The file details uploaded should match with the details displayed in Salesforce application after the file upload is complete [Mandatory] Generate functional test cases for file upload. [Mandatory] The file details uploaded should match with the details displayed in Salesforce application of the uploaded file [Do Not] Create Non-functional test cases [Important] The file upload is for files with file type in .CSV format. [Strict] The file size should be between 1KB and 500 KB [Strict] Success message should be displayed when file is uploaded successfully [Strict] Failure message should be displayed when file is not uploaded successfully [Strict] An error message should be displayed when an attempt is made to upload malicious file ID Description Pre-Requisite Steps to Execute Expected Results 001 Validate file upload for valid .CSV format file in Salesforce application 1. Login into Salesforce application in test environment Navigate to Fee Schedule Object Click on upload Browse and select the .CSV file that needs to be uploaded Click on Save Verify is Success message is displayed for

	Successful upload Verify the details in the upload file in Salesforce application matched with the file that was uploaded Need to create test case to technically validate the functionality
--	--

Weak Prompt:

Generate test cases for file upload

Response of weak prompt:

Below is a comprehensive set of **File Upload Test Cases** categorized by functionality, validation, security, performance, and usability.

1. Functional Test Cases

TC ID	Test Scenario	Expected Result
FU_001	Upload a valid file	File uploads successfully
FU_002	Upload multiple valid files	All files upload successfully
FU_003	Upload file using drag-and-drop	File uploads successfully
FU_004	Upload file using Browse button	File uploads successfully
FU_005	Replace an uploaded file	New file replaces old file
FU_006	Remove uploaded file before submission	File is removed successfully
FU_007	Upload file and submit form	File is stored and linked correctly
FU_008	Cancel upload in progress	Upload stops successfully
FU_009	Retry failed upload	Upload resumes successfully
FU_010	Upload file after page refresh (if supported)	Upload resumes or behaves as designed

2. File Type Validation

TC ID	Test Scenario	Expected Result
FU_011	Upload supported file type (PDF)	Upload successful
FU_012	Upload supported image file (JPG, PNG)	Upload successful
FU_013	Upload supported document (DOCX, XLSX)	Upload successful
FU_014	Upload unsupported file type (.exe)	Error message displayed
FU_015	Upload unsupported archive format	Upload rejected
FU_016	Upload file with incorrect extension	Upload rejected
FU_017	Rename .exe file to .jpg and upload	Validation detects actual file type
FU_018	Upload file without extension	Handled as per requirements

TC ID	Test Scenario	Expected Result
FU_019	Upload corrupted file	Appropriate validation/error shown
FU_020	Upload password-protected file	System handles according to requirements

3. File Size Validation

TC ID	Test Scenario	Expected Result
FU_021	Upload file below maximum limit	Upload successful
FU_022	Upload file exactly at size limit	Upload successful
FU_023	Upload file exceeding size limit	Error displayed
FU_024	Upload zero-byte file	Validation message shown
FU_025	Upload very large file	Upload handled per requirements
FU_026	Upload multiple files exceeding total size limit	Validation message displayed

4. File Name Validation

TC ID	Test Scenario	Expected Result
FU_027	Upload file with normal name	Upload successful
FU_028	Upload file with spaces in name	Upload successful
FU_029	Upload file with special characters	Handled correctly
FU_030	Upload file with Unicode characters	Upload successful
FU_031	Upload file with very long filename	Validation performed
FU_032	Upload duplicate filename	Rename or overwrite per requirement
FU_033	Upload file with leading/trailing spaces	Handled correctly

5. Security Test Cases

TC ID	Test Scenario	Expected Result
FU_034	Upload executable file (.exe)	Rejected
FU_035	Upload script file (.js)	Rejected if restricted
FU_036	Upload malicious file containing malware	Malware detection triggered
FU_037	Upload file containing virus	Upload blocked
FU_038	Upload file with SQL injection in filename	No system impact
FU_039	Upload file with XSS payload in filename	Payload sanitized
FU_040	Upload file with path traversal characters (../)	Rejected/sanitized
FU_041	Upload double-extension file (file.jpg.exe)	Rejected

TC ID	Test Scenario	Expected Result
FU_042	Upload file and access unauthorized user's file	Access denied
FU_043	Direct URL access to uploaded file without permission	Access denied
FU_044	Upload encrypted file when prohibited	Rejected

6. Performance Test Cases

TC ID	Test Scenario	Expected Result
FU_045	Upload large file under normal load	Acceptable response time
FU_046	Upload multiple files simultaneously	System remains stable
FU_047	Concurrent uploads by multiple users	No degradation beyond limits
FU_048	Upload during peak load	System performs within SLA
FU_049	Network interruption during upload	Recovery/retry works correctly
FU_050	Slow network upload	Progress indicator functions properly

7. UI/UX Test Cases

TC ID	Test Scenario	Expected Result
FU_051	Verify upload button visibility	Button displayed correctly
FU_052	Verify file type information shown	Supported formats displayed
FU_053	Verify upload progress bar	Progress updates accurately
FU_054	Verify success message after upload	Correct message displayed
FU_055	Verify error message for invalid upload	Meaningful error displayed
FU_056	Verify uploaded file preview	Preview shown if supported
FU_057	Verify uploaded file download link	File downloadable
FU_058	Verify delete icon for uploaded file	File removed successfully

8. Compatibility Test Cases

TC ID	Test Scenario	Expected Result
FU_059	Upload file from Chrome	Works correctly
FU_060	Upload file from Firefox	Works correctly
FU_061	Upload file from Safari	Works correctly
FU_062	Upload file from Edge	Works correctly
FU_063	Upload file on Android device	Works correctly
FU_064	Upload file on iOS device	Works correctly

TC ID	Test Scenario	Expected Result
FU_065	Upload from tablet device	Works correctly

9. API-Level Test Cases (if upload uses API)

TC ID	Test Scenario	Expected Result
FU_066	Upload with valid authentication token	Upload successful
FU_067	Upload without authentication	Access denied
FU_068	Upload with expired token	Unauthorized response
FU_069	Upload malformed request	Proper error response
FU_070	Verify upload response payload	Correct metadata returned
FU_071	Verify file checksum integrity	Uploaded file unchanged
FU_072	Verify storage path generation	Path generated correctly

10. Negative Test Cases

TC ID	Test Scenario	Expected Result
FU_073	Click upload without selecting file	Validation message displayed
FU_074	Upload unsupported and supported files together	Invalid files rejected
FU_075	Disconnect internet during upload	Error/retry option shown
FU_076	Upload same file repeatedly	System handles duplicates
FU_077	Upload file after session timeout	User prompted to re-login
FU_078	Submit form before upload completes	Proper validation enforced
FU_079	Upload file with reserved system filename	Handled safely
FU_080	Upload huge number of files at once	Limit validation triggered

Key Areas Often Missed

- MIME type validation vs file extension validation
- Virus/malware scanning
- Duplicate file handling
- Unicode filenames
- Interrupted uploads and resume functionality
- Authorization checks for uploaded file access
- XSS/SQL Injection via file names and metadata
- Storage cleanup after failed uploads
- Audit logging of upload activities

These test cases can be adapted for web, mobile, desktop, or API-based file upload features.

ICEPOT Prompt:

Act as a Senior Test Engineer.

The testing will be performed in Salesforce application in test environment for US Health care domain. The import/file upload functionality is introduced under Fee Schedule section in Salesforce application. The file will contain the transaction details of the amount transferred from the Insurance company to the Hospital. The file details uploaded should match with the details displayed in Salesforce application after the file upload is complete

[Mandatory]Generate functional test cases for file upload.

[Mandatory] The file details uploaded should match with the details displayed in Salesforce application of the uploaded file

[Do Not] Create Non-functional test cases

[Important]The file upload is for files with file type in .CSV format.

[Strict] The file size should be between 1KB and 500 KB

[Strict] Success message should be displayed when file is uploaded successfully

[Strict] Failure message should be displayed when file is not uploaded successfully

[Strict] An error message should be displayed when an attempt is made to upload malicious file

It should be in table format with the following column names

|ID|Description|Pre-Requisite|Steps to Execute|Expected Results|

001|Validate file upload for valid .CSV format file in Salesforce application|1. Login into Salesforce application in test environment|Navigate to Fee Schedule Object|Click on upload|Browse and select the .CSV file that needs to be uploaded|Click on Save|Verify is Success message is displayed for Successful upload|Verify the details in the upload file in Salesforce application matched with the file that was uploaded|

Need to create test case to technically validate the functionality

Response of ICEPOT Prompt:

Below is a comprehensive set of functional test cases for the Fee Schedule CSV Import/File Upload functionality in Salesforce. These test cases focus on technical validation of the upload process while ensuring that the imported data exactly matches the data displayed in Salesforce after upload.

ID	Description	Pre-Requisite	Steps to Execute	Expected Results
001	Validate successful	1. Login to Salesforce Test	1. Navigate to Fee Schedule.2. Click	File uploads successfully. Success message is displayed.

ID	Description	Pre-Requisite	Steps to Execute	Expected Results
	upload of a valid .CSV file	Environment.2. User has access to Fee Schedule object.3. Valid CSV file (1 KB–500 KB) is available.	Upload.3. Browse and select a valid .CSV file.4. Click Save.5. Open the uploaded Fee Schedule records.	All transaction details displayed in Salesforce exactly match the uploaded CSV file.
002	Validate upload of a valid CSV file with minimum supported file size (1 KB)	Same as TC001	Upload a valid .CSV file of exactly 1 KB.	Upload is successful. Success message is displayed. Data displayed in Salesforce matches the uploaded CSV file.
003	Validate upload of a valid CSV file with maximum supported file size (500 KB)	Same as TC001	Upload a valid .CSV file of exactly 500 KB.	Upload is successful. Success message is displayed. All uploaded transaction details match the CSV file.
004	Validate upload of a CSV file with file size less than 1 KB	Same as TC001	Upload a .CSV file smaller than 1 KB.	Upload is rejected. Failure message is displayed. No records are imported into Salesforce.
005	Validate upload of a CSV file with file size greater than 500 KB	Same as TC001	Upload a .CSV file larger than 500 KB.	Upload is rejected. Failure message is displayed. No records are imported.
006	Validate upload of a file with unsupported extension	Same as TC001	Select a file with extension other than .CSV (e.g., .xlsx, .txt, .pdf). Click Save.	Upload is rejected. Failure message is displayed. No data is imported.

ID	Description	Pre-Requisite	Steps to Execute	Expected Results
007	Validate upload without selecting a file	Login to Salesforce and navigate to Fee Schedule.	Click Upload. Without selecting any file, click Save.	Validation or failure message is displayed indicating that a file must be selected.
008	Validate upload of an empty CSV file	Same as TC001	Upload an empty .CSV file.	Upload fails. Failure message is displayed. No records are imported.
009	Validate upload of a CSV file with missing mandatory columns	Same as TC001	Upload a .CSV file with one or more mandatory columns removed.	Upload fails. Failure message indicating invalid file structure or missing mandatory fields is displayed. No records are imported.
010	Validate upload of a CSV file with blank mandatory field values	Same as TC001	Upload a .CSV file where mandatory fields contain blank values.	Upload fails. Failure message is displayed. No incomplete records are imported.
011	Validate upload of a malformed CSV file	Same as TC001	Upload a .CSV file with invalid delimiter, broken row structure, or inconsistent columns.	Upload fails. Failure message indicating invalid CSV format is displayed. No records are imported.
012	Validate upload of duplicate transaction records	Same as TC001	Upload a .CSV file containing duplicate transaction records.	System processes duplicate records according to business rules. Appropriate success/failure message is displayed. Salesforce data reflects the expected behavior.
013	Validate transaction	Same as TC001	Upload a valid .CSV file with a known	Total number of records displayed in Salesforce equals

ID	Description	Pre-Requisite	Steps to Execute	Expected Results
	record count after upload		number of transaction records. Verify imported records.	the number of records in the uploaded CSV file.
014	Validate all uploaded field values match Salesforce records	Same as TC001	Upload a valid .CSV file. Verify each imported record.	Every field (Transaction ID, Insurance Company, Hospital, Payment Amount, Payment Date, etc.) exactly matches the uploaded CSV file.
015	Validate numeric transaction amount mapping	Same as TC001	Upload a .CSV file containing decimal transaction amounts.	Uploaded payment amounts are displayed accurately without truncation or rounding differences.
016	Validate date field mapping after upload	Same as TC001	Upload a .CSV file containing transaction dates.	Dates displayed in Salesforce exactly match the uploaded CSV values in the expected format.
017	Validate upload of CSV containing special characters in text fields	Same as TC001	Upload a valid .CSV file containing supported special characters in Hospital or Insurance Company names.	Upload is successful. Success message is displayed. Special characters are stored and displayed correctly.
018	Validate upload of CSV containing duplicate file name	Same as TC001	Upload a valid .CSV file. Upload the same file again.	System behaves according to business rules (accept/reject/update). Appropriate success or failure message is displayed.

ID	Description	Pre-Requisite	Steps to Execute	Expected Results
019	Validate successful upload confirmation message	Same as TC001	Upload a valid .CSV file.	Success message is displayed immediately after successful upload.
020	Validate failure message for invalid upload	Same as TC001	Upload an invalid .CSV file (invalid format or invalid size).	Failure message is displayed indicating upload was unsuccessful.
021	Validate malicious file upload detection	Same as TC001	Rename a malicious executable or script file with a .CSV extension and upload it.	Upload is blocked. Error message indicating a malicious file is displayed. No records are imported.
022	Validate upload of CSV file containing invalid data types	Same as TC001	Upload a .CSV file where numeric fields contain alphabetic values or date fields contain invalid values.	Upload fails. Failure message is displayed. No invalid records are imported.
023	Validate upload when mandatory transaction identifier is duplicated	Same as TC001	Upload a .CSV file containing duplicate Transaction IDs.	Upload is processed according to business validation rules. Appropriate success/failure message is displayed.
024	Validate upload of CSV file containing leading and trailing spaces	Same as TC001	Upload a valid .CSV file with leading/trailing spaces in text fields.	Upload succeeds if supported. Data is stored and displayed according to application requirements.

ID	Description	Pre-Requisite	Steps to Execute	Expected Results
025	Validate uploaded data persistence after successful upload	Same as TC001	Upload a valid .CSV file. Refresh the page and reopen the Fee Schedule records.	Uploaded records remain available. Displayed data exactly matches the uploaded CSV file.

Coverage Summary

These test cases cover the mandatory functional validations:

- ☒ Valid .CSV upload
- ☒ Only .CSV file type accepted
- ☒ File size validation (1 KB–500 KB)
- ☒ Success message validation
- ☒ Failure message validation
- ☒ Malicious file detection and error message
- ☒ CSV structure validation
- ☒ Mandatory field validation
- ☒ Data type validation
- ☒ Record count validation
- ☒ Field-by-field data comparison between the uploaded CSV and Salesforce records
- ☒ Duplicate transaction validation
- ☒ Data persistence after upload

This suite is suitable for Salesforce functional testing in a US Healthcare Fee Schedule import feature and emphasizes both the technical upload process and the integrity of the imported transaction data.

Comparison

Week Prompt Response	ICEPOT Response
----------------------	-----------------

It is listing all types of test cases like Functional, Non-Functional, Security, etc.	It is listing only the functional test cases which is the required list
The Output format of the test case is very simple without much details on Pre-requisite and execution steps	The Output format is as expected with Pre-requisite and detailed execution steps
The scenarios are in high level and very general	The scenarios listed are more specific to the functionality
